1. Preamble

This privacy policy applies to the Report Builder Cloud version and outlines how we use and protect our customers' information. By using our products and/or services, you agree to this Privacy Policy and our practices. These are defined in more detail below.

2. Type of data stored in the Cloud App

In the Report Builder Cloud version, no personal data is stored or transferred to third-party companies.

Only meta and configuration data is stored. User relevant data, such as the report creator, is stored using an anonymized user ID. The app fetches all relevant data from the Jira Cloud and calculates all reports directly in the user's browser.

This metadata is stored concretely using an anonymized user ID:

- Report name
- Owner
- Constraints
- Creation and update data

The app calculates all reports on the fly and does not store Jira issues/comments/work logs or similar.

3. Data storage location

All metadata is stored in the Atlassian Cloud. The cloud app is hosted and operated in a German data center - this is also where the data is located.

The data is not deleted automatically, but on request to support. We have ensured that all stored and anonymized data is logically separated so that the actions of one user do not affect those of another.

4. Means of processing

To obtain and modify data in Jira Cloud, our app uses public Jira REST APIs. For example, using the Jira Cloud REST API, we obtain issues and work logs to calculate reporting information.
